

Energy and Greenhouse Gas Emissions Management Policy

In **Goldair Cargo S.A.**, we acknowledge the fact that efficient management of energy and greenhouse gas emissions is essential to achieve progress in sustainable development. Through energy reduction measures and continuous monitoring of our consumption we target in reducing our greenhouse gas emissions and minimize also our operational costs.

With this policy, we aim to:

- Improve our energy performance by reducing energy consumption
- Support our sustainability performance
- Reduce our greenhouse gas emissions
- Minimize our environmental impact in our processes
- Support new ways of clean and renewable energy

In order to do so, we have formed several objectives presented above:

- Ensure compliance with the climate law
- Measuring and reporting our energy use and greenhouse gas emissions,
- Setting annual targets to reduce energy consumption and track results,
- Develop our infrastructure and energy efficient equipment,
- Complying with both national and international legislation regarding energy and carbon management
- Setting energy and greenhouse gas emissions targets as priorities when making decisions for the design of our operations
- Exploring new and innovative options for clean and renewable energy

Our target is to reduce greenhouse gas and energy and reduce carbon emissions by 30% by 2030 compared to 2019 emissions.
